Specify custom location and filename of the included Glyphicons icon font. Useful for those including Bootstrap via Bower.

```
// [converter] If $bootstrap-sass-asset-helper is used, provide path relative to the
assets load path.

// [converter] This is because some asset helpers, such as Sprockets, do not work with
file-relative paths.

$icon-font-path: if($bootstrap-sass-asset-helper, "bootstrap/", "../fonts/bootstrap/")
!default;

/** File name for all font files.
$icon-font-name:      "glyphicons-halflings-regular" !default;

/** Element ID within SVG icon file.
$icon-font-svg-id:    "glyphicons_halflingsregular" !default;
```

## Components

Define common padding and border radius sizes and more. Values based on 14px text and 1.428 line-height (~20px to start).
